Optigen Accession #: **16-5998**
Report issued for: **Wiggins**

OptiGen Test Certificate

Optigen Accession #: 16-5998

Test Completed: 08/30/2016
Report Issued: 08/30/2016

Test Performed: **DM Test**

Result: **Normal**
Sample Type: **Blood**

Registered Name: **CH Snowbound Wiggins**

Reg#: **PR18331002**

Breed: **Miniature Poodle**

ID#: **985112005083089**

Sex: **Male**

Date of Birth: **May 24, 2015**

Owner(s):

Sharon Skrobarcek

Susan Peaske King
OptiGen Authorized Signature

www.optigen.com

Test Results: Genotype of your dog is Homozygous wild type (NORMAL/CLEAR)

Risk for developing DM: Normal/Clear dogs are at very low risk of developing Degenerative Myelopathy (DM) caused by the *SOD1* mutation.

Significance for breeding: Genetically Normal/Clear dogs can be bred to any dog and will produce offspring that are not at increased risk of developing DM due to the *SOD1* mutation.

For further information, please consult the OptiGen website at www.optigen.com

DNA tests do not replace the importance of veterinary examinations.

International DNA Based Genetic Database: To register this result with OFA, make a copy, sign below, mail WITH FEE, to OFA, 2300 E. Nifong Blvd, Columbia, MO 65201-3856 or FAX to 573-875-5073. www.offa.org
I hereby certify that the sample submitted was of the animal described on this application. I authorize the OFA to release all information on the test results thus placing the results in the public domain and I hereby release OFA from any and all liability associated with the release of test information.

Test Results: Genotype of your dog is **NORMAL/CLEAR**.

Risk for developing prcd-PRA: This dog will never develop the prcd form of PRA (progressive rod-cone degeneration form of Progressive Retinal Atrophy). Note that PRA in Poodles appears to consist of at least two different genetic defects. Prcd-PRA is by far the most frequently identified cause of PRA in Miniature and Toy Poodles. However, a poodle of known status for prcd-PRA could still be at risk for another, less frequent, and as yet unidentified form of PRA.

Significance for breeding: Genetically Normal/Clear dogs can be bred to any dog and will produce no pups affected with the prcd form of PRA.

This interpretation is based on the test result of the DNA test for the specific mutation identified as causing the prcd form of PRA in Miniature Poodles as of the date on this report.

For further information, please consult the OptiGen website at www.optigen.com. Note: The use of this test is patent protected and licensed to OptiGen. See http://www.optigen.com/opt9_patent.html for details.
